1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

The USPTO Interim Guidelines for Examination of Patent Applications for Patent

Subject Matter Eligibility (Official Gazette notice of November 22, 2005), Annex IV, reads as follows:

In contrast, a claimed computer-readable medium encoded with a computer program is a computer element which defines structural and functional interrelationships between the computer program and the rest of the computer which permit the computer program's functionality to be realized, and is thus statutory. See Lowry, 32F.3d at 1583-84, 32USPQ2d at 1035.

Claims that recite nothing but the physical characteristics of a form of energy, such as frequency, voltage, or the strength of a magnetic field, define energy or magnetism per se, and such are nonstatutory phenomena. O'Reilly, 56 U.S. (15 How.) at 112-14. Moreover, it does not appear that a claim reciting a signal encoded with functional descriptive material falls within any of the categories of patentable subject matter set forth in Sec. 101.

... a signal does not fall within one of the four statutory classes of Sec. 101.

... signal claims are ineligible for patent protection because they do not

fall within any of the four statutory classes of Sec. 101.

2. Claim 21 is therefore rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Claim 21 is drawn to a recording medium that stores functional descriptive material (codes) for performing a method.

Since the specification allows for the medium to be transmission-type media realized in the form of radio frequency or light wave transmissions (text in section [0042]), regardless of other tangible media options, the claims are not statutory because a carrier wave is considered a signal, which is neither a process nor a product. A signal is a form of energy in the absence of any physical structure or tangible material.

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

4. Claims 1-20 are allowable over the prior art because the prior art does not disclose or suggest the convergence adjustment based on an initial screen centering signal, as specifically claimed.
